PROPOSAL – MYCARE LOGO

Why the current logo needs a refresh

Current logo

- Two unrelated typefaces that don’t belong together
- An extreme jump from black to light weight
- Thin, light-gray strokes that break up at small sizes
- Crowded “UTSW” letters that collide
- Raster only – no app icon, stacked, reversed, or one-color version

PROPOSAL – MYCARE LOGO

A modern UTSW MyCare

UTSW MyCare

The idea

The U stands for UT Southwestern – and for you. The dot is the patient, held at the center of care.

What changed

One type family, sturdier weights, open spacing, and a symbol that doubles as the app icon.

PROPOSAL – MYCARE LOGO

How we made the logo

STEP 1

Audit

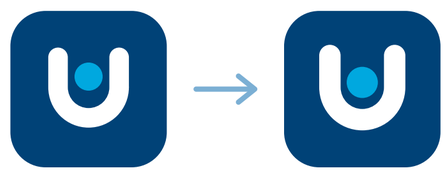

Found mismatched typefaces, extreme weights, thin gray strokes, and no icon or vector file.

STEP 2

Type

Tested four weight pairings in one family. ExtraBold with Medium balanced best.

STEP 3

Symbol

Drew a U that cradles a dot, then enlarged the U and set the dot lower in the cradle.

STEP 4

System

Built every version from one vector source and tested it at 187 px wide and 32 px.

PROPOSAL – MYCARE LOGO

One system for every surface

Stacked, for square and narrow spaces

Reversed, on UT Southwestern Blue or 75% black and darker

One color, in black or UT Southwestern Blue

App icon and favicon, legible down to 32 px

PROPOSAL – MYCARE LOGO

Specifications and next steps

Clear space on every side equals the cap height of “UTSW.” Minimum size: 187 px wide on screen.

Next step: CMPA review

This is a proposal. Share it with CMPA (logo@utsouthwestern.edu) for approval before any use.

Element	Specification
“UTSW” and tile	UT Southwestern Blue #004278 (PMS 2945)
